

OPSVERA – Phase 1 Scope of Work

Oct 4, 2026

Phase 1 delivers one web application, usable on desktop and mobile, that takes a project from booking to live cost: a confirmed booking creates the project, the team works and logs time on it, approved time and expenses become project cost, and the dashboard shows budget and margin in real time.

Phase 1 workflow

1. **Project booking.** A project is booked for a client with the client's confirmation attached: the client email, or a verbal confirmation note if there is no email.
2. **Project code.** On confirming the booking, the system generates a unique project code.
3. **Project created.** The project is created automatically from the booking, with client, value and budget carried over.
4. **Project scheduled.** Start and end dates, milestones, team members and tasks are planned.
5. **Attendance.** Employees clock in from mobile (GPS, selfie, geofence) or from the office network.
6. **Work.** Employees run a timer on their project task or add time manually.
7. **Approval.** Team Lead / Project Manager approves weekly timesheets and expenses.
8. **Project cost.** Approved hours ($\times$ employee cost rate) and approved expenses post to the project's cost ledger.
9. **Dashboard.** Budget vs actual, cost and margin update live for management.

Modules and features

1. Login, Roles & Permissions

- Login with email and password; forgot / reset password.
- Default roles: CEO / Director, HR / Admin, Project Manager, Finance, Team Lead, Employee.
- Admin can create new roles (e.g. Sales, Booking Manager) and set their permissions.
- **Module access:** which menus and screens each role can open.

- **Action access:** View, Create, Edit, Delete, Approve and Export, set per module.
- **Data access:** Own, Team, Project, Office or All records.
- **Sensitive fields:** salary, cost rate, project value and margin visible only to permitted roles.
- Permission matrix screen in Settings to manage all of the above.
- Audit log of sensitive actions: booking confirmation, salary or cost rate change, approvals, deletes.

2. Company & Office Setup

- Company profile, logo, financial year and currency.
- Offices and job sites (e.g. Nagpur, Nashik, Mumbai, Riyadh) with map location and geofence radius.
- **Office-wise settings:** time zone, weekly off days, holiday calendar, office IP / WiFi for office punch.
- Departments and designations.
- Project types (e.g. Hospital, Data Centre, Pharma, Solar) with a short code for the project code.
- Configurable attendance rules: grace time, late mark, half-day, minimum full-day hours, overtime trigger.
- Leave types and approval flow settings.

3. Employees

- Employee list with search and filters (office, department, status).
- Employee profile: personal details, joining date, department, designation, reporting manager, office.
- Monthly salary and hourly cost rate.
- Allowed attendance method: mobile, office network, or both.
- Document upload.
- Bulk import from Excel.
- Activate / deactivate employee and send login invite.
- Employee 360 view: profile, attendance, leave, projects, timesheet hours.

4. Clients & Project Booking

- Clients list with company details and contact persons.
- **New booking:** client, project name, project type, office, booking date, project value, budget hours, billing type, expected start and end date, description of scope.
- **Client confirmation (required):**
 - **Email:** attach the client's confirmation email (PDF, image or email file).
 - **Verbal:** record who confirmed, date, mode (call / meeting) and what was agreed.
- PO / work order upload, optional.
- A verbal booking can be updated with the email later; the booking shows "Email pending" until then.
- Booking status: Draft → Confirmed → Project Created; or Cancelled.
- **Confirm booking** generates the project code and creates the project.
- **Project code:** auto-generated and unique, in a configurable format, e.g. MOR-26-27-HOS-0043 (company prefix, financial year, project type, running number).
- Booking register with search and filters, and a link from each booking to its project.
- Only permitted roles can create or confirm bookings.

5. Projects, Scheduling & Tasks

- Project created from booking with code, client, type, value, budget hours and dates.
- Project manager and project members.
- **Schedule:** start and end date, milestones with due dates.
- Tasks with assignee, due date, estimated hours, priority and status.
- Kanban board and list view.
- Task comments and attachments.
- Project status: Active, On Hold, Completed, Cancelled.
- Project 360: booking details and confirmation, schedule, team, tasks, hours, cost, budget and margin.

6. Attendance

- Clock in / out on mobile with GPS location, selfie and geofence check.
- Office punch from the office IP / WiFi.
- Late mark, early exit, half-day, absent and overtime calculated from shift and office rules.

- Times recorded in each office's own time zone.
- Live attendance board: present, late, absent, on leave, missing punch, with office filter.
- Monthly attendance register per employee.
- Regularisation request for missed or wrong punch, with manager approval.
- Export to Excel.

7. Shifts

- Shift templates with start, end, grace and break time.
- Assign shifts and weekly offs to employees or departments.
- Weekly shift roster view.

8. Leave

- Leave types with yearly quota and carry forward.
- Leave balance per employee.
- Apply leave (full day / half day) with reason.
- Manager approve / reject.
- Team leave calendar.
- Approved leave updates attendance automatically.

9. Timer & Timesheets

- Start / stop timer on a project task, from desktop or mobile; a project and task must be selected.
- Manual time entry.
- Billable / non-billable marking.
- Weekly timesheet with submit.
- Approve / reject by Team Lead or Project Manager, with comment and bulk approve.
- Reminders for timesheets not submitted.

10. Expenses

- Expense entry: date, amount, category, project, billable flag, receipt photo.
- Categories with limits.
- Manager approval, then Finance approval.
- Reimbursement status: pending / reimbursed.

11. Project Cost & Dashboards

- **Project Cost Ledger:** approved hours × employee cost rate, plus approved expenses, posted per project.
- Budget vs actual hours and cost on every project.
- Budget alerts at 80% and 100% of budget.
- **CEO dashboard:** bookings this month, active projects, over-budget projects, today's attendance, pending approvals, cost by project, utilization; filter by office.
- **Manager dashboard:** team attendance, pending approvals, project status.
- **Employee "My Day":** clock-in, running timer, today's tasks, leave balance, pending items.
- Reports: bookings, attendance, leave, timesheets, project cost, expenses; exportable to Excel.

12. Notifications & Search

- In-app and email notifications for approvals, rejections, booking confirmations and budget alerts.
- Global search (Ctrl + K) for projects, employees, clients and bookings.

Business rules

- A project can be created only from a confirmed booking.
- A booking cannot be confirmed without an email attachment or a verbal confirmation note.
- Each project code is unique and never reused, including for cancelled bookings.
- An approved timesheet is locked, and its cost posts to the project ledger exactly once. Corrections are made by reopening the entry with an audit record.
- The cost rate used is the employee's rate on the day the work was done, so later rate changes do not change past cost.
- Approved leave marks attendance automatically; holidays and weekly offs follow each office's calendar.
- Users see data only as per their role's data access; each company's data is kept separate.
- Amounts are stored to two decimal places; all times are stored in UTC and shown in local office time.

User roles

Role	Default access
CEO / Director	All modules and data, bookings, salary, cost, margin, reports
HR / Admin	Company and office setup, employees, salary, attendance, shifts, leave
Project Manager	Bookings (if permitted), own projects, schedule, tasks, team, timesheet and expense approvals for own projects, project cost
Finance	Expense approval and reimbursement, project cost ledger, cost reports
Team Lead	Team attendance, leave and timesheet approvals, task assignment
Employee	Own attendance, timer, timesheets, leave, expenses and tasks

All default access can be changed by the admin from the permission matrix.

Design

- Screens follow the OPSVERA UI/UX Blueprint and the shared interactive prototype for the Phase 1 modules.
- Design system from the blueprint: Inter font, primary blue #2F80ED, 240px left sidebar, 8–12px corner radius, right-side detail drawers, Ctrl + K command search.
- Role-based home: CEO, Manager and Employee each land on their own dashboard.
- Responsive layout: the same app works on desktop and mobile, and employees can install it on the phone home screen.

Deliverables

- Web application with all modules above, following the shared OPSVERA UI/UX Blueprint.

- Mobile-friendly version of the same app, installable on the phone home screen, for employee attendance, timer, leave and expenses.
- Multi-company ready structure, where each company's data is kept separate.
